

Section 1.1 - Characteristics of a Function

Learning Goal:

By the end of today I will be able to recognize the difference between a FUNCTION and a RELATION.

By the end of today, I will be able to recognize a function using the vertical line test.

By the end of today, I will have a better understanding of functional notation and set notation.

Sep 9-9:43 PM

FUNCTIONS TERMINOLOGY

Relation

➔ a relationship between two variables

Function

➔ a relation for which each element in the domain is assigned only one element in the range

Domain

➔ set of all x coordinates

➔ horizontal axis

➔ independent variable

Range

➔ set of all y coordinates

➔ vertical axis

➔ dependent variable

Set Notation

➔ a way of writing a set of items or numbers within curly brackets { }.

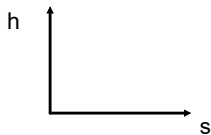

Mapping Diagram

➔ a drawing with arrows to show the relationship between each value of x and the corresponding values of y

Jul 4-3:42 PM

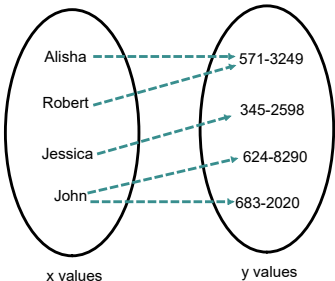

Which of the following fit the definition of a Function? Remember...to be a function an x-value cannot have two y-values

Example 1 The height of a football after the time kicked

The ball will never be at two heights at one time, therefore it IS a function.

Example 2

It's okay that Alisha and Robert share a phone number but NOT a function because John has two phone numbers.

Jul 5-12:42 AM

Which of the following fit the definition of a Function? Remember...to be a function an x-value cannot have two y-values

Example 3

a)

x	y
-1	3
2	-3
1	-1
-2	0
3	1

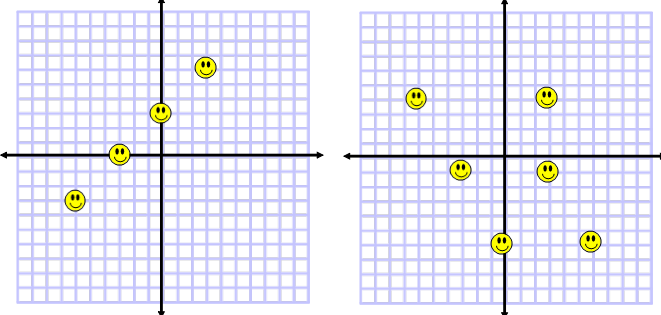

YES a Function
no repeated x-values

b)

x	y
3	3
2	-1
4	1
3	-2
1	2

NOT a Function
x=3 has two y-values

Example 4

YES a Function
no repeated x-values

NOT a Function
x=7 has four y-values

Jul 5-12:52 AM

Using reasoning to decide whether a relation is a function...

b)

x	y
-1	-3
0	1
1	5
2	9

Solution

Domain = $\{-1, 0, 1, 2\}$

Range = $\{-3, 1, 5, 9\}$

This relation is a function.

Jul 5-12:07 AM

Using reasoning to decide whether a relation is a function...

Solution

Domain = $\{1, 2, 3\}$

Range = $\{2, 3, 4, 5\}$

This relation is not a function.

Jul 5-12:06 AM

DETERMINING IF A RELATION IS A FUNCTION ...USING THE VLT

vertical-line test

a test to determine whether the graph of a relation is a function. The relation is not a function if at least one vertical line drawn through the graph of the relation passes through two or more points

Feb 10-2:09 PM

Connecting functions with graphs

Which of the following graphs are functions?

Vertical
Line Test

Jul 5-12:06 AM
