

Solving by Graphing

1. Determine if the point given is the solution to the linear system.

a) POI (2,-1) for $3x + 2y = 4$
 $-x + 3y = 5$

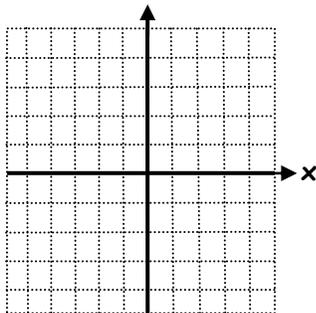

b) POI (1,-2) for $y = 3x - 5$
 $y = 2x - 4$

2. For the graph given below, identify the point of intersection, and then verify your solution.

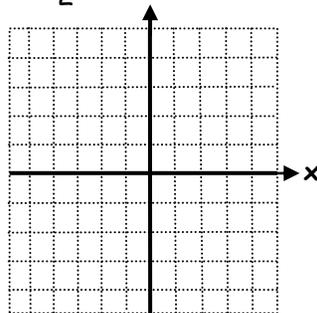

3. Solve each system by graphing.

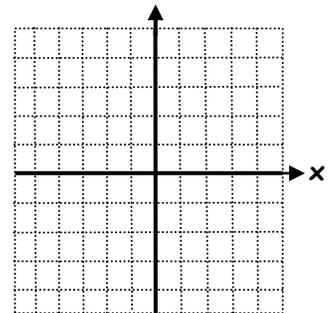

a) $y = -x + 3$
 $y = x - 5$

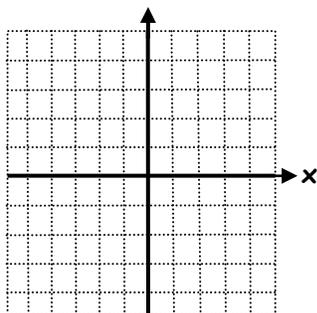

b) $y = 2x - 3$
 $y = \frac{1}{2}x$

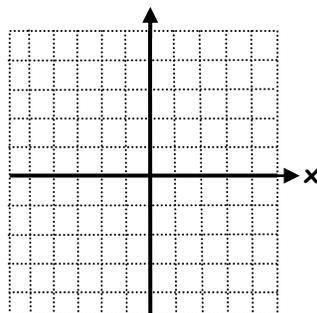

c) $2x - y = 4$
 $y = -3x + 1$

d) $y = 3$
 $y = 2x - 5$

e) $3x + 3y = 6$
 $x - y = 2$

f) $6x + 3y = 12$
 $2x + y = 4$
